**A Heart for Art** Sue Jones, 2014-02-26 If you are interested in understanding art, you need both tools and knowledge of some basic facts. In *A Heart for Art*, author Sue Jones seeks to help you gain what you need to further your understanding, providing a guide to the four main categories of art: pictorial, sculpture, architecture, and crafts. In this study, Jones provides examples of some of the greatest works of art in these four categories and discusses them in terms of the five questions one must ask to further their art appreciation: - Who made it? - When was it created? - What is the subject? - Why did the artist create the art? - What is the style? Including such works as paintings of Van Gogh, the Mona Lisa, The Thinker, and the Venus de Milo, *A Heart for Art* helps you learn about art-how to understand it and how to make an informed decision about what you are seeing and experiencing.

*Biomedical Signal and Image Processing* Kayvan Najarian, Robert Splinter, 2005-12-21 All of the biomedical measurement technologies, which are now instrumental to the medical field, are essentially useless without proper signal and image processing. *Biomedical Signal and Image Processing* is unique in providing a comprehensive survey of all the conventional and advanced imaging modalities and the main computational methods used for processing the data obtained from each. This book offers self-contained coverage of the mathematics and biology/physiology necessary to build effective algorithms and programs for biomedical signal and image processing applications. The first part of the book details the main signal and image processing, pattern recognition, and feature extraction techniques along with computational methods from other fields such as information theory and stochastic processes. Building on this foundation, the second part explores the major one-dimensional biological signals, the biological origin and importance of each signal, and the commonly used processing techniques with an emphasis on physiology and diagnostic applications, while the third section does the same for imaging modalities. Throughout the book, the authors rely on practical examples using real data from biomedical systems. They supply several programming examples in MATLAB® to provide hands-on experience and insight. Integrating all major modalities and computational techniques in a single source, *Biomedical Signal and Image Processing* is a perfect introduction to the field as well as an ideal reference for the established professional.

**Advances in Computing and Communications, Part IV** Ajith Abraham, Jaime Lloret Mauri, John Buford, Junichi Suzuki, Sabu M. Thampi, 2011-07-06 This volume is the fourth part of a four-volume set (CCIS 190, CCIS 191, CCIS 192, CCIS 193), which constitutes the refereed proceedings of the First International Conference on Computing and Communications, ACC 2011, held in Kochi, India, in July 2011. The 62 revised full papers presented in this volume were carefully reviewed and selected from a large number of submissions. The papers are the papers of the Workshop on Cloud Computing: Architecture, Algorithms and Applications (CloudComp2011), of the Workshop on Multimedia Streaming (MultiStreams2011), and of the Workshop on Trust Management in P2P Systems (IWTMP2PS2011).

**Geriatric Physiotherapy And Its Principles** Dr. Priyadarshini Mishra (PT), Dr. Vandana Patel (PT), Dr. Sonali Soumyashree (PT), Dr. Ankita Rout (OT), 2023-07-26 Functional enhancement for the elderly is the primary goal of geriatric physiotherapy, often known as physical therapy for the elderly. This is crucial since there are several health issues associated with becoming older. Diseases including obesity, arthritis, osteoporosis, cancer, Alzheimer's, diabetes, depression, tooth decay, respiratory illnesses, and general physical weakness are among them. Capillary density decreases as vessel walls thicken as we age. Age-related decreases in muscle blood flow are explained by structural and functional abnormalities in the vascular system, which obstruct blood flow and heighten pain perceptions. There are three primary foci within the field of physiotherapy. These are the fields of musculoskeletal medicine, cardiology and neurology. Musculoskeletal refers to the branch of medicine that treats trauma to the human body's skeletal muscles, bones, and joints. The elderly patients we encounter on a regular basis often present with mobility difficulties and osteoarthritis. Using fundamental physiotherapy methods and giving these patients some thought and making some simple adjustments to their home environment may do wonders for their comfort and mobility.

*Essentials of Human Anatomy and Physiology* Mrs. Parameswari Jagari, Rajesh.E, Dr. Amit Upadhyay, Dr. B. Premagowri, Human anatomy is study of the body's structures from a scientific perspective. A few of those structures are quite tiny, making the use of a microscope essential for their examination. It is simple to see, handle, measure, and weigh other, bigger

structures. The Greek origin of the word for anatomy implies to cut apart. The study of human anatomy began with an emphasis on external observations, such as those of battle wounds. Later on, doctors were given permission to learn more by dissecting human corpses. Dissection is the process of separating parts of a body so that their individual properties and connections may be studied. Medical schools, anatomy classes, and pathology laboratories all make use of dissection today. However, several imaging methods have been created to allow for the observation of structures in live persons. Using these methods, doctors may see malignant tumors or broken bones inside a live patient. Anatomy, like most other branches of science, contains subfields. The major structures of body that can be seen without a microscope are the focus of gross anatomy. Since the prefix macro- implies large, gross anatomy is also known as macroscopic anatomy. On the other hand, the prefix micro- denotes small, thus microscopic anatomy is the investigation of structures that may be seen without a microscope but only under magnification. Both cytology (the study of cells), and histology (the study of tissues), fall under the umbrella of microscopic anatomy. Anatomists have been able to examine ever-smaller structures of the body as microscope technology has improved, from slices of massive structures like the heart to three-dimensional structures of huge molecules in the body

Scripture and Interpretation Ariel Feldman, Liora Goldman, 2014-11-10 The discovery of the Dead Sea Scrolls more than sixty years ago has revealed a wealth of literary compositions which rework the Hebrew Bible in various ways. This genre seems to have been a popular literary form in ancient Judaism literature. However, the Qumran texts of this type are particularly interesting for they offer for the first time a large sample of such compositions in their original languages, Hebrew and Aramaic. Since the rewritten Bible texts do not use the particular style and nomenclature specific to the literature produced by the Qumran community. Many of these texts are unknown from any other sources, and have been published only during the last two decades. They therefore became the object of intense scholarly study. However, most the attention has been directed to the longer specimens, such as the Hebrew Book of Jubilees and the Aramaic Genesis Apocryphon. The present volume addresses the less known and poorly studied pieces, a group of eleven small Hebrew texts that rework the Hebrew Bible. It provides fresh editions, translations and detailed commentaries for each one. The volume

thus places these texts within the larger context of the Qumran library, aiming at completing the data about the rewritten Bible.

The Life and Times of Takabuti in Ancient Egypt Rosalie David, Eileen Murphy, 2021 The mummy of Takabuti is one of the best known antiquities in the Ulster Museum, Belfast. Takabuti was a young woman who lived in Egypt during a tumultuous period, c. 600 BC. Her mummy was unwrapped and investigated in Belfast in 1835. While the focus of the book is on Takabuti, it shows how the combination of archaeological, historical and inscriptional evidence with multidisciplinary scientific techniques can enable researchers to gain a wealth of information about ancient Egypt. This not only relates to the individual historical context, ancestry and life events associated with Takabuti, but also to wider issues of health and disease patterns, lifestyle, diet, and religious and funerary customs in ancient Egypt. This multi-authored book demonstrates how researchers act as 'forensic detectives' piecing together a picture of the life and times of Takabuti. Questions addressed include - Who was Takabuti? When did she live? Where did she come from and where did she reside? What did she eat, and did she suffer from any diseases? Did she suffer a violent death, and how was she mummified and prepared for burial?
